Tapreco — Setup Guide

How to run the Tapreco web app on your computer (3D tax technology platform).

1. Install Node.js (one time)

Download and install **Node.js 20 or newer** from **nodejs.org**. Restart the terminal afterwards. Check it works:

```
node -v
```

2. Unzip the project

Unzip `tapreco.zip`. You get a folder called `gamma`. This is the project folder — it contains a file named `package.json`. **Every command below is run inside this folder.**

3. Open a terminal in that folder

Windows: open the `gamma` folder, click the address bar, type `cmd` and press Enter. (Or in VS Code: File → Open Folder, then Terminal → New Terminal.)

4. Run these commands

```
npm install
npm run dev
```

`npm install` downloads the libraries (first time only, about a minute). `npm run dev` starts the app. Leave that terminal open.

5. Open the app

In **Chrome or Edge** go to: **http://localhost:5173**

Demo login	demo@tapreco.com
Password	Tapreco2026!

You can also create your own account with **Enter Platform**.

Other commands (optional)

`npm run build`	Create the production build in `dist/`
`npm run preview`	Serve the production build
`npm run typecheck`	Check the TypeScript

`npm run lint`	Run the code linter

Good to know

- There is **no backend yet**. The app runs in demo mode and saves data in your own browser, so you start with sample clients.
- The 3D needs a browser with **WebGL** (any recent Chrome, Edge or Firefox). Without it you see a simple flat fallback.
- Stop the app with **Ctrl + C** in the terminal.
- If port 5173 is busy, Vite prints another address — open that one instead.

> **Main pages to look at:** Home (scroll the 3D story), Tax Tools gallery, Tax Planner (rotating globe), Dashboard, Reports.
